PharmaPedia Match

A 2D pharmacy learning game (Demonstration)

Student name: _____

Student ID: _____

Class / Section: Pharm-D _____

Pharm-D IT Lab – Assignment 2

Student project for the Pharm-D, IT lab. Not medical advice.

What the project is for

- A browser game that teaches 15 common medicines and their drug classes
- Players match a medicine to its class, or a class to its medicine
- For Pharm-D students revising pharmacology before quizzes and exams
- Works on laptop and mobile, online or offline, with no login

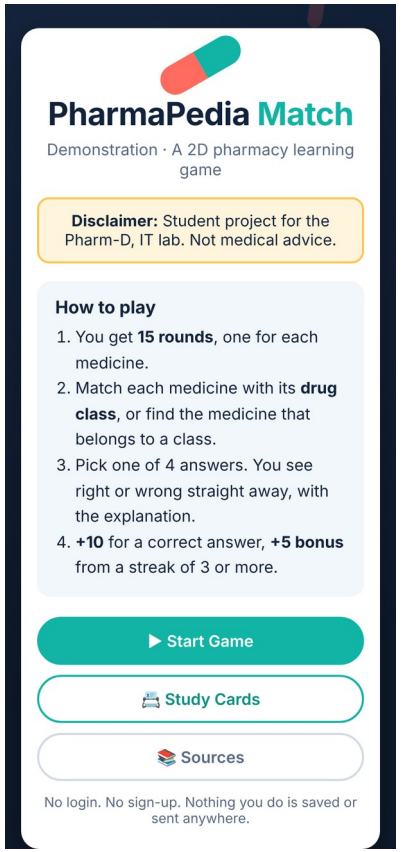

Objectives

- Recognise the drug class of 15 commonly used medicines
- Link each medicine to its main use (indication)
- Learn from mistakes through instant feedback and an end-of-game review
- Make revision fun with points, streaks and a star rating

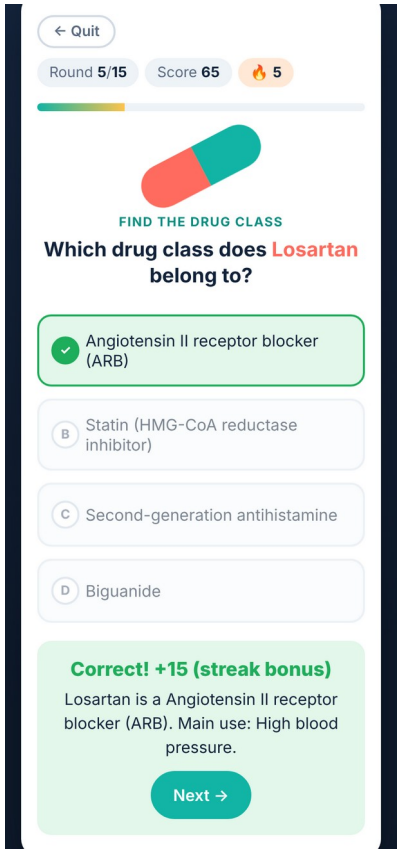

AI tools used and how they helped

- Claude (Anthropic) – AI coding assistant: wrote the HTML, CSS and JavaScript, the screens, scoring and feedback logic
- AI also helped test the game by playing it start to finish 3 times on laptop and mobile sizes
- The pharmacy content was written and checked by me against my notes and references – not invented by AI
- AI declaration: AI arranged the content; I supplied and verified every medicine fact

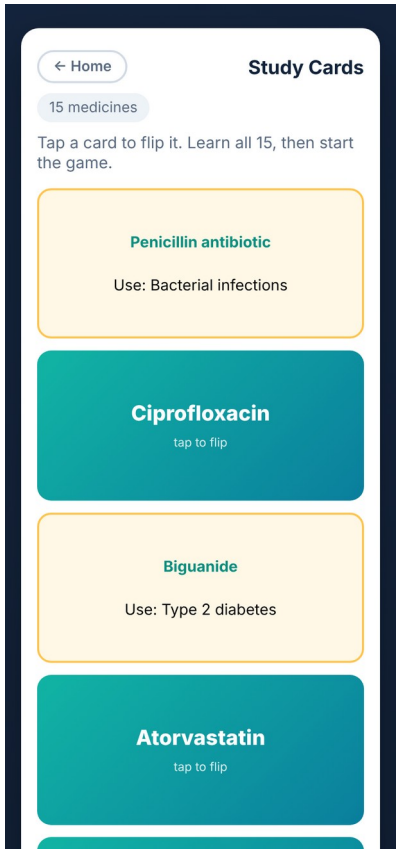

Main features

1. Start screen + disclaimer

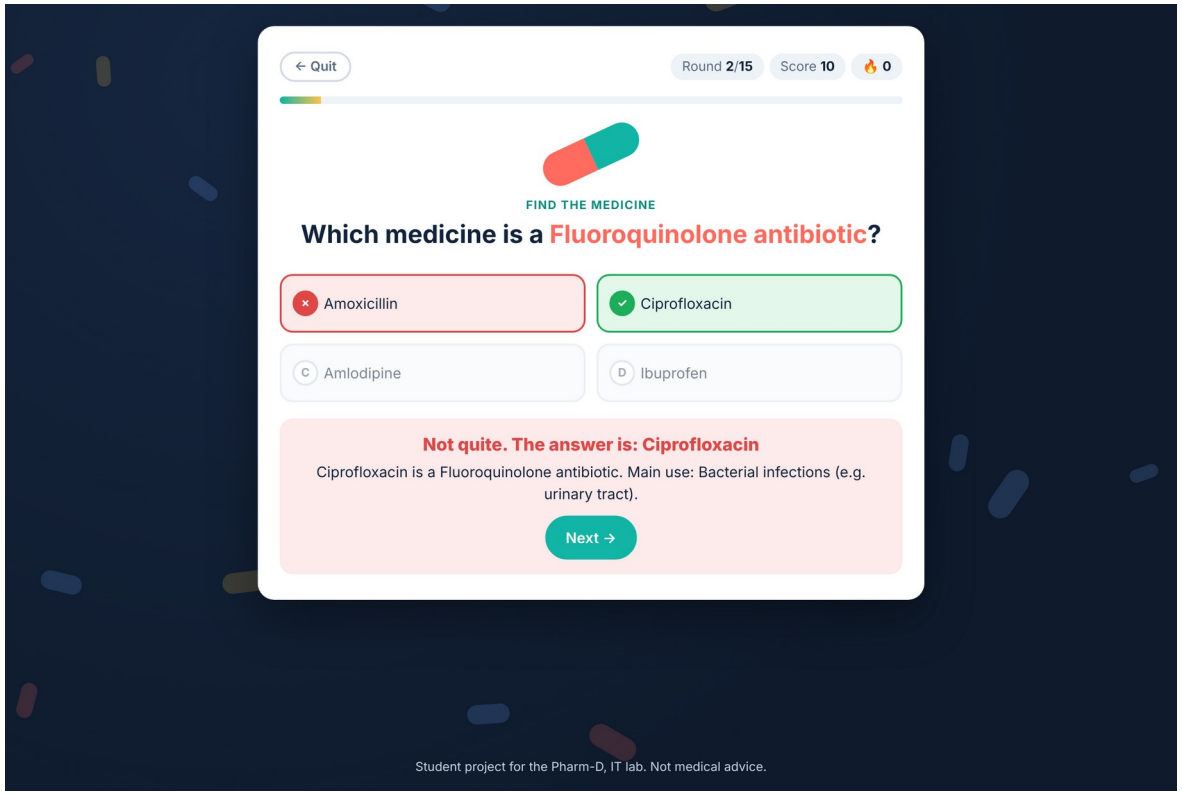

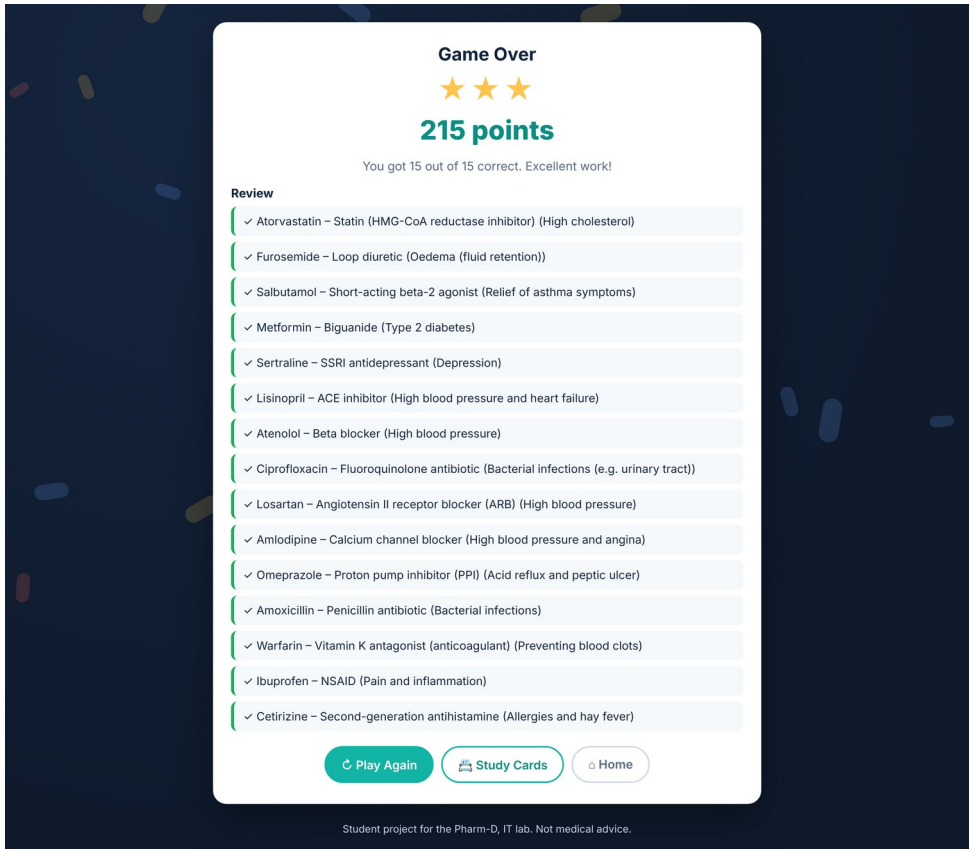

2. Instant feedback + scoring

3. Study cards (flip to learn)

The game in play and the score screen

Wrong answer: shows the correct answer + explanation

Results: score, stars and a review of all 15

Sources and AI declaration

- Pharmacology lecture notes – _____ (course / topic)
- British National Formulary (BNF) – edition ____
- Katzung, Basic & Clinical Pharmacology – edition ____, chapters ____
- AI: Claude was used for code only. All medicine facts were checked by me.

What worked, what did not, what next

- Worked: all screens, scoring, feedback and study cards run on laptop and mobile
- Challenge: keeping every answer unique so there is only one correct option
- Next: add more medicines and a timed mode
- Next: a second round type matching medicines to their main use
